In today’s world, where commute is discussed in flight duration, it becomes more necessary than ever to have some uniformity in healthcare—especially Emergency healthcare. An epic first has been the widespread training and acceptance of ACLS/ATLS. Now almost all Emergency Rooms across the world speak the language of ACLS flowcharts. Say if an ED provider sitting in Kenya consults a French specialist and says we followed the V fib arrest pathway, then the communication is clear and effective. The next step is to bring in standardization of care to all aspects of emergency medicine—be it ACS, stroke, trauma, ID or end of life care. This is the only way for the medical community to keep up with the shrinking world.

With this vision we bring forward to you this new issue of the Journal of Emergency Medicine and Intensive Care.
